## EXPLANATORY NOTE

The series embodies results of investigations, usually of restricted scope, intended to aid or direct management or utilization practices and as guides for administrative or legislative action. It is issued in limited quantities for official use of Federal, State or cooperating agencies and in processed form for economy and to avoid delay in publication.

Drift Bottle Records for Gulf of Maine  
and Georges Bank, 1931-56

The drift-bottle data tabulated here are the result of extended studies by the United States Bureau of Fisheries and more recently by the United States Fish and Wildlife Service in the region of Georges Bank and the Gulf of Maine (fig. 1).

The apparent decline of the cod and haddock in this area has demanded attention over a period of years. Fishery biologists and oceanographers have been making concerted efforts to understand better the many complex, interrelated factors which influence the productivity of these fisheries.

One aspect of these studies has been an attempt by means of drift bottles to learn the nontidal movement of the waters bearing the planktonic eggs and larvae of commercially important fish which spawn in the region.

By the end of June 1956, 17 drift-bottle seedings had been made, representing the years 1931, 1932, 1933, 1934, 1953, 1955, and 1956. Walford (1938) discussed the bottle returns from the 1931 and 1932 cruises. Day (in press) made comparisons on a seasonal and year-to-year basis of all 17 cruises and considered surface-wind values for a period of 60 days following each bottle seeding.

## THE DATA

The original data are on file at the Woods Hole Oceanographic Institution, where a punchcard system is maintained and supplemented as new returns are received or further studies initiated.

The listings below include all recoveries on record as of 5 December 1956 in the Georges Bank - Gulf of Maine area from the following cruises:

- 1931    Albatross II, 17-29 April  
         Albatross II, 26 May - 7 June
- 1932    Albatross II, 4-18 April
- 1933    Atlantis, cruise 16, 19-28 June
- 1934    Atlantis, cruise 28, 27 April - 13 May
- 1953    Albatross III, cruise 46, 19 March - 2 April  
         Albatross III, cruise 48, 24 April - 8 May  
         Albatross III, cruise 50, 25 May - 2 June
- 1955    Albatross III, cruise 57, 21 February - 2 March  
         Albatross III, cruise 58, 19 March - 1 April  
         Albatross III, cruise 60, 19 April - 3 May  
         Albatross III, cruise 61, 16-28 May
- 1956    Albatross III, cruise 71, 20 February - 2 March  
         Albatross III, cruise 72, 21-31 March  
         Albatross III, cruise 73, 17-28 April  
         Albatross III, cruise 75, 16-29 May  
         Albatross III, cruise 76, 11-24 June

Returns received between 5 December 1956 and 21 October 1957 are listed in the Appendix.

The records for the cruises made during the 1930's are believed complete so far as returns are concerned. However, the original logs do not adequately record all release positions; consequently, in some instances positions of bottle-drop stations from which there were no returns cannot be listed. This is particularly true in the cases where bottles were distributed in pairs every 2 miles along a track.

Data for the Albatross III cruises made during the 1950's are complete in all respects both as to releases and recoveries. During this period bottles were released only at stations, which formed a fairly uniform grid over the area of study.

#### BOTTLE TYPE AND DISTRIBUTION

The bottles used were those commonly employed for carbonated drinks. They were of clear glass and measured approximately 22 cm. high and 6 cm. in diameter with a capacity of 8 fluid ounces.

Of the bottles released on the 1931-34 cruises, most were equipped with drogues in an effort to reduce windage. More often than not, however, the drogue had been lost sometime before the bottle was recovered.

In figure 2 the components of the bottles used during the 1950's are shown; a completed drift bottle is shown at the right.

## BREAK THIS BOTTLE

This bottle is one of several hundred released at sea to study ocean currents. The exact place and date of release has been recorded and is on file.

You can make the record for this bottle complete by furnishing the information requested on the enclosed postal card. We will send a reward of fifty cents (\$0.50) and tell you where the bottle was dropped overboard if you will return the card with the best information you can provide.

Your information will be combined with that sent in by other finders of bottles. This is part of a study of the drift of floating objects being conducted by the Woods Hole Oceanographic Institution, the Fish and Wildlife Service and the Fisheries Research Board of Canada.

Your cooperation in giving accurate information will be of great aid.

**Nº 34101**

**FINDER OF THIS BOTTLE  
PLEASE FILL IN THE INFORMATION  
AS INDICATED AND SEND BY MAIL**

**Nº 34101**

When found, date \_\_\_\_\_  
 Where found (name of beach or place on shore, near what  
 Coast Guard station, Lighthouse, or other prominent reference point) \_\_\_\_\_  
 Your Name (sign and print) \_\_\_\_\_  
 Your Home Address (print) \_\_\_\_\_

Fifty Cents (\$0.50) will be sent to finder on return of this card.

**BUSINESS REPLY CARD**  
NO POSTAGE STAMP NECESSARY IF MAILED IN THE UNITED STATES

**WOODS HOLE OCEANOGRAPHIC INSTITUTION  
 WOODS HOLE, MASSACHUSETTS**

**BREAK THIS BOTTLE**

This bottle is one of several hundred released at sea to study ocean currents. The exact place and date of release has been recorded and is on file.

Instead of drogues, dry sand ballast was added to all odd-numbered bottles. Those with even numbers contained no ballast. Six of each were launched at each release station. It was intended that the ballasted bottles float vertically at or near the surface and thus be less influenced by the action of winds and breaking waves. The results, however, indicate no significant difference between the conjectured movement of the two types.
